

Photography for IRC certificate

If your boat is not a standard production boat with which we are familiar, or your boat has had modifications to the design, we usually ask for photos so that we can assess the boat in the fairest way possible. In order to help us do this, we ask that you follow the photography guidelines below:

KEEL/RUDDER:

Although this photo shows the keel type, it is taken at an angle and is obstructed

This is better!

If the keel is 'low cg' (as shown above), a fore/aft view is extremely helpful

This side profile photo shows the rudder depth and style

This clearly shows rudder and propeller

RIG:

Skeg clearly visible as is propeller

A photo of the rig showing the number of spreaders, spreader sweep and other rigging, e.g. runners/checkstays is useful

INTERIOR:

Photos facing aft are helpful. In these two you can clearly see the aft accommodation and heads

Photos showing the main cabin and forward

Clear photos of the Chart Table and Galley
